In his final contribution to the psychoanalytic literature published two months before his untimely death on December 21, 2000, the late Stephen A. Mitchell provided a brilliant synthesis of the interrelated ideas that hover around, and describe aspects of, the relational matrix of human experience. Relationality charts the emergence of the relational perspective in psychoanalysis by reviewing the contributions of Loewald, Fairbairn, Bowlby, and Sullivan, whose voices converge in apprehending the fundamental relationality of mind. Mitchell draws on the multiple dimensions of attachment, intersubjectivity, and systems theory in espousing a clinical approach equally notable for its responsiveness and responsible restraint. Relationality "signals a new height in Mitchell's always illuminating writing" (Nancy Chodorow) and marks the "coming of age" of the relational perspective in psychoanalysis (Peter Fonagy).

v.4-45 includes section titled: Abstracts of tuberculosis.

The love affair that psychoanalysis has had with its own founder has obscured just how different the field is today from what it was a century ago, when Freud was writing. Now Stephen A. Mitchell, a central figure in the modernization of psychoanalysis, shows how the field is moving beyond the confines of Freudian drive theory to encompass the concerns of contemporary life.

Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report The Future of Nursing: Leading Change, Advancing Health, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.
