Angular in action (Book, 2018) [WorldCat.org]  
Angular usually handles this transaction by specifying a constructor parameter and its type. The parameter type serves as the injector lookup token. Angular passes this token to the injector and assigns the result to the parameter. The following is a typical example.

Angular  
Using @angular/elements library. One of the simpler and honestly recommended and opinionated approach is the using @angular/elements library which is well described in official documentation. In short, the idea is to build an Angular application as WebComponent and use it in this form in the parent ' s SPA app.
