From various perspectives, these distinguished commentators describe the practical aspects of technology's reach into business and trade.

Macroeconomics in Context lays out the principles of macroeconomics in a manner that is thorough, up to date, and relevant to students. Like its counterpart, Microeconomics in Context, the book is attuned to economic realities—and it has a bargain price. The in Context books offer affordability, engaging treatment of high-interest topics from sustainability to financial crisis and rising inequality, and clear, straightforward presentation of economic theory. Policy issues are presented in context—historical, institutional, social, political, and ethical—and always with reference to human well-being.

The first in-depth scholarly analysis of the effects of Western sanctions, and Russia's response on the Russian economy.

This unique volume offers a definitive new history of European economies at war from 1914 to 1918. It studies how European economies mobilised for war, how existing economic institutions stood up under the strain, how economic development influenced outcomes and how wartime experience influenced post-war economic growth. Leading international experts provide the first systematic comparison of economies at war between 1914 and 1918 based on the best available data for Britain, Germany, France, Russia, the USA, Italy, Turkey, Austria-Hungary and the Netherlands. The editors' overview draws some stark lessons about the role of economic development, the importance of markets and the damage done by nationalism and protectionism. A companion volume to the acclaimed The Economics of World War II, this is a major contribution to our understanding of total war.

The Global Innovation Index 2020 provides detailed metrics about the innovation performance of 131 countries and economies around the world. Its 80 indicators explore a broad vision of innovation, including political environment, education, infrastructure and business sophistication. The 2020 edition sheds light on the state of innovation financing by investigating the evolution of financing mechanisms for entrepreneurs and other innovators, and by pointing to progress and remaining challenges – including in the context of the economic slowdown induced by the coronavirus disease (COVID-19) crisis.

The Long Battle for Global Governance charts the manner in which largely excluded countries, variously described as 'ex-colonial', 'underdeveloped', 'developing', 'Third World' and lately 'emerging', have challenged their relationship with the dominant centres of power and major institutions of global governance across each decade from the 1940s to the present. The book offers a fresh perspective on global governance by focusing in particular on the ways in which these countries have organised themselves politically, the demands they have articulated and the responses that have been offered to them through all the key periods in the history of modern global governance. It re-tells this story in a different way and, in so doing, describes and analyses the current rise to a new prominence within several key global institutions, notably the G20, of countries such as Brazil, China, India and South Africa. It sets this important political shift against the wider history of longstanding tensions in global politics and political economy between so-called 'Northern' and 'Southern' countries. Providing a comprehensive account of the key moments of change and contestation within leading international organisations and in global governance generally since the end of the Second World War, this book will be of great interest to scholars, students and policymakers interested in politics and international relations, international political economy, development and international organisations.

Thinking on development informs and inspires the actions of people, organizations and states in their continuous effort to invent a better world. This volume examines the ideas behind development: their origins, how they changed and spread over time, and how they may evolve over the coming decades. It also examines the real-life experiences of different countries and organizations have been inspired by, and contributed to, thinking on development. Each chapter will be an analytical survey of thinking about development, highlighting debates and taking into account critical perspectives. The volume is intended as a key reference on the range of concepts used to think about development -their origins, evolution and trajectories- and act as a resource for an audience of scholars, graduate students and practitioners.

Who really creates wealth in our world? And how do we decide the value of what they do? At the heart of today's financial and economic crisis is a problem hiding in plain sight. In modern capitalism, value-extraction - the siphoning off of profits, from shareholders' dividends to bankers' bonuses - is rewarded more highly than value-creation: the productive process that drives a healthy economy and society. We misidentify takers as makers, and have lost sight of what value really means. Once a central plank of economic thought, this concept of value - what it is, why it matters to us - is simply no longer discussed. Yet, argues Mariana Mazucato in this penetrating and passionate new book, if we are to reform capitalism - to radically transform an increasingly sick system rather than continue feeding it - we urgently need to rethink where wealth comes from. Who is creating it, who is extracting it, and who is destroying it? Answers to these questions are key if we want to replace the current parasitic system with a type of capitalism that is more sustainable, more symbiotic: that works for us all. The Value of Everything will reignite a long-needed debate about the kind of world we really want to live in.
