The ASHRAE Heat Balance Method states that the “ sum of all space instantaneous heat gains at any given time does not necessarily (or even frequently) equal the cooling load for the space at that same time ”. Figure 2 attempts to convey this phenomenon by demonstrating the time delay associated with the ‘Gains vs Loads’ discussion.

29.8 2001 ASHRAE Fundamentals Handbook (SI)

Simply put, heating and cooling loads are the rates of energy input (heating) or removal (cooling) required to maintain an indoor environment at a desired temperature and humidity condition. Heating and air conditioning systems are designed, sized, and controlled to accomplish that energy transfer. The amount of heating or cooling
