This book is not a substitution for the helicopter flight manual and should not be treated as such. It is intended to give further information relating to the different sections of the flight manual and to explain the helicopter systems more clearly. I have added in some extra information where I felt it would be beneficial but overall I have tried to keep the book as simple as possible while still covering all the sections in the flight manual. This book will not teach you how to fly the aircraft. However it will give you the necessary technical information to conduct your flight safely. It is written with the new Jet Ranger pilot in mind. It is assumed that you already hold your private pilot's licence and have limited or no previous Jet Ranger experience. You should be familiar with flying techniques, as this book will not teach you how to fly.

Trade Paperback + PDF eBook "bundle" version: Trade paperback book comes with code to download the eBook from ASA's website. This comprehensive textbook explains the aerodynamics of helicopter flight as well as helicopter maneuvers, going beyond the strictly "how-to" type of aviation manual. Helicopter pilots need to thoroughly understand the consequences of their actions and base them upon sound technical knowledge; this textbook explains why the helicopter flies and even more importantly, why it sometimes does not. Beginning with aerodynamics, each step of the process is fully illustrated and thoroughly explained--from the physics of advanced operations to helicopter design and performance--providing helicopter pilots with a solid foundation upon which to base their in-flight decisions. Containing discussions on the NOTAR (no tail rotor) system, strakes, principles of airspeed and high-altitude operations, operations on sloping surfaces, and sling operations, this revised edition
