Thank you for downloading

Online Library Calculus Integration Problems And

Solutions integration
problems and solutions.

Maybe you have knowledge
that, people have look
hundreds times for their
chosen readings like this
calculus integration
problems and solutions, but

Online Library Calculus Integration Problems And

Solutions
end up in malicious
downloads.

Rather than reading a good
book with a cup of coffee in
the afternoon, instead they
juggled with some harmful
virus inside their laptop.

Online Library Calculus Integration Problems And

Solutions integration problems and solutions is available in our book collection an online access to it is set as public so you can download it instantly.

Our digital library spans in

Online Library Calculus Integration Problems And

Solutions multiple locations, allowing you to get the most less latency time to download any of our books like this one. Kindly say, the calculus integration problems and solutions is universally compatible with any devices

INTEGRAL CALCULUS -

EXERCISES 45 6.2 Integration

by Substitution In problems

1 through 8, find the

indicated integral. 1. $\int (2x+6)^5 dx$

Solution.

Substituting $u = 2x+6$ and $\frac{1}{2} du = dx$

Online Library Calculus Integration Problems And Solutions

$du = dx$, you get $\int (2x+6)^5 dx =$
 $\frac{1}{2} \int u^5 du = \frac{1}{2} \left(\frac{u^6}{6} \right) + C = \frac{1}{12} (2x+6)^6 + C.$

2. $\int [(x-1)^5 + 3(x-1)^2 + 5] dx$ Solution.

Substituting $u = x-1$ and $du = dx$, you get $\int [(x-1)^5 + 3(x-1)^2 + 5] dx = \int (u^5 + 3u^2 + 5) du = \frac{1}{6} u^6 + u^3 + 5u + C$

MATH 105 921 Solutions to
Integration Exercises

Solution: Using partial
fraction, we get: $\frac{1}{x^3+1} = \frac{A}{x} + \frac{B}{x+1} + \frac{C}{x-1} = \frac{A(x^2-1)}{(x-1)(x+1)(x-1)}$

Online Library Calculus Integration Problems And

Solutions

$+ B(x^2 + x) + C(x^2 + x) =$
 $(A + B + C)x^2 + (C + B)x + (A)$
 x^3 Thus, $A + B + C = 0$, $C + B = 0$
and $A = 1$. Therefore, $A = 1$,
and $B + C = 1$, which gives $C = 1$
 2 . and $B = 1 - 2 = -1$. So, $Z = \int \frac{1}{x^3} dx = Z$.

Evaluate the integral $\int \frac{1}{x} dx$. Also, if $\int \frac{1}{2x-1} dx$.

Solution: We suggest the substitution $u = 2x - 1$. Then $du = 2 dx$, and if $x = \frac{u+1}{2}$ then $dx = \frac{1}{2} du$. So we have $\int \frac{1}{2x-1} dx = \int \frac{1}{u} \cdot \frac{1}{2} du = \frac{1}{2} \ln|u| + C = \frac{1}{2} \ln|2x-1| + C$.
