Chapter 19: Viruses . Overview .

Experimental work with viruses has provided important evidence that genes are made of nucleic acids. Viruses were also important in working out the molecular mechanisms of DNA replication, transcription, and translation. Viruses have been important in the development of techniques of manipulating and transferring genes.

pneumonia or sinusitis. The new coronavirus SARS-CoV-2 that causes COVID-19 is also a virus.

What's the difference between Bacteria and Viruses?

Fighting Bacteria with Viruses. The emergence of superbugs, or multidrug resistant bacteria, has become a major challenge for pharmaceutical companies and a serious health-care problem. According to a 2013 report by the US Centers for Disease Control and Prevention (CDC), more than 2 million people are infected with drug-resistant bacteria in the US annually, resulting in at least 23,000 deaths ...
