This is the first reference ever devoted to medieval philosophy. It covers all areas of the field from 500-1500 including philosophers, philosophies, key terms and concepts. It also provides analyses of particular theories plus cultural and social contexts.

Book Review Index provides quick access to reviews of books, periodicals, books on tape and electronic media representing a wide range of popular, academic and professional interests. The up-to-date coverage, wide scope and inclusion of citations for both newly published and older materials make Book Review Index an exceptionally useful reference tool. More than 600 publications are indexed, including journals and national general interest publications and newspapers. Book Review Index is available in a three-issue subscription covering the current year or as an annual cumulation covering the past year.

Vols. for 1969- include a section of abstracts.

This volume has 41 chapters written to honor the 100th birthday of Mario Bunge. It celebrates the work of this influential Argentine/Canadian physicist and philosopher. Contributions show the value of Bunge's science-informed philosophy and his systematic approach to philosophical problems. The chapters explore the exceptionally wide spectrum of Bunge's contributions to: metaphysics, methodology and philosophy of science, philosophy of mathematics, philosophy of physics, philosophy of psychology, philosophy of social science, philosophy of biology, philosophy of technology, moral philosophy, social and political philosophy, medical philosophy, and education. The contributors include scholars from 16 countries. Bunge combines ontological realism with epistemological fallibilism. He believes that science provides the best and most warranted knowledge of the natural and social world, and that such knowledge is the only sound basis for moral decision making and social and political reform. Bunge argues for the unity of knowledge. In his eyes, science and philosophy constitute a fruitful and necessary partnership. Readers will discover the wisdom of this approach and will gain insight into the utility of cross-disciplinary scholarship. This anthology will appeal to researchers, students, and teachers in philosophy of science, social science, and liberal education programmes. 1. Introduction Section I. An Academic Vocation (3 chapters) Section II. Philosophy (12 chapters) Section III. Physics and Philosophy of Physics (4 chapters) Section IV. Cognitive Science and Philosophy of Mind (2 chapters) Section V. Sociology and Social Theory (4 chapters) Section VI. Ethics and Political Philosophy (3 chapters) Section VII. Now in a special gift edition, and featuring a brand new foreword by Anthony Gottlieb, this is a dazzlingly unique exploration of the works of significant philosophers throughout the ages and a definitive must-have title that deserves a revered place on every bookshelf.

Introducing readers to the extremely rich tradition of Arabic literature, this Anthology covers some of its major themes and concerns across the centuries, from its early beginnings to modern times. The texts chosen are a 'library of personal preferences' of a scholar who has spent half a century or more in the company of Arabic books, marking then translating those passages that seemed to him to capture some of its most memorable moments. Reflecting the great diversity and unpredictability of Arabic literature as the carrier of a major world culture, both pre-modern and modern, the Anthology is divided thematically to highlight modern issues such as love, religion, the human self, human rights, freedom of expression, the environment, violence, secular thought, and feminism. The short, easy-to-read texts are accessible to non-specialists, providing an ideal entry point to this extraordinary literature.

How is science fiction from the Arab and Muslim world different than mainstream science fiction from the West? What distinctive and original contributions can it make? Why is it so often neglected in critical considerations of the genre? While other books have explored these questions, all have been from foreign academic voices. Instead, this book examines the nature, genesis, and history of Arabic and Muslim science fiction, as well as the challenges faced by its authors, in the authors' own words. These authors share their stories and struggles with censors, recalcitrant publishers, critics, the book market, and the literary establishment. Their uphill efforts, with critical contributions from academics, translators, and literary activists, will enlighten the sci-fi enthusiast and fill a gap in the history of science fiction. Topics covered range from culture shock to conflicts between tradition and modernity, proactive roles for female heroines, blind imitation of storytelling techniques, and language games.

This book is intended to provide a comprehensive understanding of the essential clinical trial elements in a concise fashion. It is intended to serve as a quick reference guide to all the personnel involved in the conduct of clinical trials as well as to those who plan to enter this field. Spanning over 167 pages the book provides a thorough compilation on, 1. Fundamentals of Clinical Research 2. Glossary of Clinical Trials Terminology (1052 frequently used terminologies of clinical research) 3. Abbreviations (224 frequently used terminologies of clinical research) 4. Clinical Trial Stakeholders 5. Clinical Study Process 6. Location of Essential Documents Before, During and After Completion of a Clinical Trial 7. Critical Milestones of a Clinical Trial Project 8. Overview of Regulatory Environment in USA, Australia, Europe, UK and India Being the first and only book on this important topic it has fulfilled the unmet need and is of great benefit to all the personnel involved in clinical research.
