If the ball is then dropped from rest it will fall back to the ground. The gravitational potential energy is converted to kinetic energy.

Gravitational potential energy and work done

As soon as you let go, gravity pulls the weight down and the potential energy starts converting to another type called kinetic energy, the energy of motion. At the bottom of the swing, all potential ...

Why the Virgin Galactic spaceship didn't reach orbit last weekend

A moving object has kinetic energy because work has been done on it. When work is done energy in one form is transferred to the kinetic energy of the moving object. To stop the object again ...

Kinetic energy and work done

When an avalanche occurs, the snow gathers speed and its stored potential energy is turned into kinetic energy (the energy of movement). Moving objects have a type of energy called kinetic energy. The ...

DK Science: Energy

As the ball rises, it slows down, as the kinetic energy inherent in its velocity is exchanged for potential energy in the form of increased altitude. Eventually the ball will reach its maximum ...

What's a suborbital flight? An aerospace engineer explains

You probably learned in high school that you have kinetic energy when a rock rolls down a hill, but a rock sitting on a mountain immobile has potential energy. These systems use the same idea.

Decomposition of available potential energy for networks of connected volumes

Imagine throwing your baseball in an open field. As the ball rises, it slows down as the kinetic energy inherent in its velocity is exchanged for potential energy in the form of increased altitude.

Branson and Bezos are taking suborbital flights to space. Here's what that means

When you let go, it falls and that potential energy is transformed into kinetic energy. The kinetic energy of the weight and the twine moves the dowel that serves as the axle of the car. This is a ...
