Spring semester admissions require the recommendation of the graduate program director, approval of the chair and the associate dean for graduate studies. For the Commonwealth Graduate Engineering Program, students may begin a course of study in either the fall or spring semester.

population with specific needs—graduate students. This valuable resource shows efforts on specific programs and strategies to enhance and enrich the graduate student experience. Contributions to this volume include a wide variety of approaches through case studies, an extensive literature review on academic integrity, an initiative for program development in the context of a broader education initiative, and a chapter on graduate fellowships for manuscripts and special collections. Many of the approaches integrate tried and true information literacy strategies, but they also put unique 'spins' on these approaches. This book's scope includes large and small colleges and universities, public and private, and specialized and general. Subjects include stand alone courses and workshops, program development, assessment, distance education, online environments, instructional design, and collaborations. This book is a valuable resource for public service librarians, information literacy/instruction librarians, library science professors, graduate program coordinators, special collections librarians, and subject specialist librarians in all areas. This book was published as a special issue of Public Services Quarterly.

This guide helps faculty and student affairs practitioners better serve graduate and professional school students as they navigate what can be an isolating, taxing, and unfamiliar context. Providing actionable strategies, as well as a common language for practitioners to advocate for themselves and for their students, this book is a quick start manual that defines current issues around graduate and professional student development. Drawing together current resources and research around post-baccalaureate student outcomes, this book explores the diverse student needs of graduate and professional students and provides a clear understanding of their social, personal, and psychological development and how to support their success. Case studies showcase specific examples of practice including a holistic development model for graduate training; integrating academic, personal, professional, and career development needs; promising practices for engagement; a diversity, equity, and inclusion approach to access and outcomes; how graduate schools can be important partners to student affairs professionals; and examples of assessment in action. This book provides tools, resources, communication strategies, and actionable theory-to-practice connections for practitioners, professionals, and faculty at all levels who work to support post-baccalaureate student thriving. Peterson's Graduate Programs in Engineering & Applied Sciences contains a wealth of information on colleges and universities that offer graduate degrees in the fields of Aerospace/Aeronautical Engineering; Agricultural Engineering & Bioengineering; Architectural Engineering, Biomedical Engineering & Biotechnology; Chemical Engineering; Civil & Environmental Engineering; Computer Science & Information Technology; Electrical & Computer Engineering; Energy & Power engineering; Engineering Design; Engineering Physics; Geological, Mineral/Mining, and Petroleum Engineering; Industrial Engineering; Management of Engineering & Technology; Materials Sciences & Engineering; Mechanical Engineering & Mechanics; Ocean Engineering; Paper & Textile Engineering; and Telecommunications. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. As an added bonus, readers will find a helpful "See Close-Up" link to in-depth program descriptions written by some of these institutions. These Close-Ups offer detailed information about the specific program or department, faculty members and their research, and links to the program Web site. In addition, there are valuable articles on financial assistance and support at the graduate level and the graduate admissions process, with special advice for international and minority students. Another article discusses important facts about accreditation and provides a current list of accrediting agencies.

Also contains brochures, directories, manuals, and programs from various College of Engineering student organizations such as the Society of Women Engineers and Tau Beta Pi.

This book covers the latest research work done in the area of interface mechanics of collagen and chitin-based biomaterials along with various techniques that can be used to understand mechanics of biological systems and materials. Topics covered include Raman spectroscopy of biological systems, scale dependence of the mechanical properties and microstructure of crustaceans thin films as biomimetic materials, as well as the role of molecular-level modeling. The use of nanomechanics to investigate interface thermomechanics of collagen and chitin-based biomaterials is also covered in detail. This book also:

- Details spectroscopy experiments as well as nanomechanic experiments
- Reviews exhaustively phenomenological models and Raman spectroscopy of biological systems
- Covers the latest in multiscaling for molecular models to predict lab-scale sample properties and investigates interface thermomechanics
