

Coordinate Geometry Questions And Answers

Recognizing the showing off ways to acquire this book **coordinate geometry questions and answers** is additionally useful. You have remained in right site to start getting this info. acquire the coordinate geometry questions and answers colleague that we manage to pay for here and check out the link.

You could purchase guide coordinate geometry questions and answers or get it as soon as feasible. You could speedily download this coordinate geometry questions and answers after getting deal. So, like you require the book swiftly, you can straight acquire it. It's suitably completely easy and thus fats, isn't it? You have to favor to in this atmosphere

Answer & Explanation. Sol : OptionD. The area of the triangle having its vertices as P(x1, y1), Q(x2, y2) and R(x3, y3) is given by. $\frac{1}{2} [x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)] = \frac{1}{2} [4(12+2) + 10(-2-5) + (-3)(5-12)] = \frac{1}{2}[4.14 - 10.7 + (-3)(-7)] = \frac{1}{2}[56 - 70 + 21] = 3.5$. Hence, solution is option D. Q.2.

The x-axis indicates the horizontal direction while the y-axis indicates the vertical direction of the plane. In the coordinate plane, points are indicated by their positions along the x and y-axes. For example: In the coordinate plane below, point L is represented by the coordinates (-3, 1.5) because it is positioned on -3 along the x-axis and on 1.5 along the y-axis. Similarly, you can figure out the positions for the points M = (2, 1.5) and N = (-2, -3).

Coordinate System; Important Questions & Answers For Class 10 Maths Chapter 7 Coordinate Geometry. Q. 1: The distance of the point P (2, 3) from the x-axis is (A) 2 (B) 3 (C) 1 (D) 5. Solution: We know that, (x, y) = (2, 3) is a point on the Cartesian plane in the first quadrant. x = Perpendicular distance from Y-axis. y = Perpendicular distance from X-axis. Therefore, the perpendicular distance from X-axis = y coordinate = 3

Answer: Coordinate geometry is needed to offer a connection between algebra and geometry with the use of graphs of lines and curves. It is an essential branch of math and usually assists us in locating points in a plane. Moreover, it also has many uses in fields of trigonometry, calculus, dimensional geometry and more.
