Kenya has a long and complex history that began thousands of years ago. Indeed, some archaeologists contend that the country was the "cradle of mankind" or, at the very least, one of the places that was home to the earliest hominids. In later centuries, Kenya's strategic location astride the Indian Ocean and the East African littoral attracted numerous foreign peoples, some of the most significant of which have been the Americans, Arabs, British, Chinese, French, Germans, and Portuguese. Additionally, Africans from throughout the subcontinent have settled in Kenya to escape conflict or political persecution, while others wanted an opportunity to begin a new life. As a result of being a gateway to the world, the country traditionally has been one of the most important business, cultural, diplomatic, and political centers in Africa. Although it has maintained this reputation during the post-independence period, Kenya, like most African countries, has been plagued by an increasing array of complex economic, political, and social problems. This third edition of Historical Dictionary of Kenya provides a starting point for those interested in any of the phases of Kenya's historical evolution. This is done through a chronology, an introductory essay, appendixes, and an extensive bibliography. The dictionary section has 500 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent access point for students, researchers, and anyone wanting to know more about Kenya.

This book explores global issues in the professional development of science teachers, and considers classroom applications of teacher training with a comparative lens. The twelve studies collected in this volume span five continents and vastly differing models of teacher education. Carefully detailing the social and cultural contexts for the teaching of science, this is a guidebook for anyone concerned with equity and reform in professional development.

This book addresses major sociological issues in sub-Saharan African education today. Its fourteen contributors present a thoroughly African world-view within a sociology of education theoretical framework, allowing the reader to see where that theory is relevant to the African context and where it is not. Several of the chapters bring a much-needed cultural nuance and critical theoretical perspective to the issues at hand. The sixteen chapters thus aim to be of interest internationally, to those who work in such fields as social and political foundations of comparative and international education, and development studies, including university professors, teacher educators, researchers, school teachers, tertiary education students, consultants and policy makers.

Includes Proceedings of the Executive council and List of members, also section "Review of books".
