Rainville Solution

Thus the integrating factor is $\exp(\int \sec x \, dx$

$= \exp[\ln(\sec x + \tan x)] = \sec x + \tan x$.

Multiplying by the integrating factor we

have $\frac{d}{dx}(\sec x + \tan x)y = 1 + \sin x$.

Integrating and simplifying yields $y/\sin z = \int \frac{1}{\sin z} dz = -\cot z + C$. The equation in standard form is $dy/dz + (1/\cos z)y = \cos z$. Thus the integrating factor is $\exp(\int \sec z dz) = \exp[\ln(\sec z + \tan z)] = \sec z + \tan z$. Multiplying by the integrating factor we have

Differential Equations is a very difficult subject to grasp fully and without the solution manual it is very hard to see how you get the answers. This book fills in the gap. One thing to take note is that the book only shows odd question answers and only answers to medium or hard questions, self explanatory questions are ignored.
