This is the fundamental truth about data protection: backup is dead. Or rather, backup and recovery, as a standalone topic, no longer has relevance in IT. As a standalone topic, it's been killed off by seemingly exponential growth in storage and data, by the cloud, and by virtualization. So what is data protection? This book takes a holistic, business-based approach to data protection. It explains how data protection is a mix of proactive and reactive planning, technology and activities that allow for data continuity. It shows how truly effective data protection comes from a holistic approach considering the entire data lifecycle and all required SLAs. Data protection is neither RAID nor is it continuous availability, replication, snapshots or backups—it is all of them, combined in a considered and measured approach to suit the criticality of the data and meet all the requirements of the business. The book also discusses how businesses seeking to creatively leverage

their IT investments and to drive through cost optimization are increasingly looking at data protection as a mechanism to achieve those goals. In addition to being a type of insurance policy, data protection is becoming an enabler for new processes around data movement and data processing. This book arms readers with information critical for making decisions on how data can be protected against loss in the cloud, on-premises, or in a mix of the two. It explains the changing face of recovery in a highly virtualized data center and techniques for dealing with big data. Moreover, it presents a model for where data recovery processes can be integrated with IT governance and management in order to achieve the right focus on recoverability across the business.

In eBOYS, Randall Stross takes us behind the scenes and inside the heads of the gutsy entrepreneurs who are financing the hottest businesses on the Web. The six tall men who started Benchmark, Silicon Valley's most exciting venture capital firm, put themselves at the cutting edge of the new economy by backing billion dollar start-ups like eBay and Webvan. The risks were enormous--but the rewards have proven to be staggering. Within two years, eBay's net worth grew from \$20 million to more than \$21 billion, while each Benchmark founding partner saw his own personal net worth soar by hundreds of millions of dollars. For two roller-coaster years, Stross had total access not only to Benchmark's executives but to the companies they financed. He was a fly on the wall as fortunes were made in an instant, snap decisions got locked in, and new ventures took off--and sometimes crashed. Here are the testosterone-pumped conversations, round-the-clock meetings, and gutsy deals that launched
