The international conference Intelligent Information Processing and Web Mining IIS:IIPWM ' 05, organized in Gdańsk-Sobieszewo on 13 – 16th June, 2005, was a continuation of a long tradition of conferences on applications of Arti?cial Intelligence (AI) in Information Systems (IS), organized by the Institute of Computer Science of Polish Academy of Sciences in cooperation with other scienti?c and business institutions. The Institute itself is deeply engaged in research both in AI and IS and many scientists view it as a leading institution both in fundamental and - plied research in these areas in Poland. The originators of this conference series, Prof. M. D?browski and Dr. M. Michalewicz had in 1992 a long-term goal of bringing together scientists and industry of di?ferent braches from Poland and abroad to achieve a creative synthesis. One can say that their dream has come to reality. Scientists from 7ve continents made their sub-m- sions to this conference. A brief look at the a?liations makes international cooperation visible. The research papers have either a motivation in c- reate applications or are o?-springs of some practical requests. This volume presents the best papers carefully chosen from a large set of submissions (about 45%). At this point we would like to express our thanks to the m- bers of Programme Committee for their excellent job. Also we are thankful to the organizers of the special sessions accompanying this conference: Jan Komorowski, Adam Przepi ó rkowski, Zbigniew W.

Wireless networks of moving objects have drawn significant attention recently. These types of networks consist of a number of autonomous or semi-autonomous wireless nodes/objects moving with diverse patterns and speeds while communicating via several radio interfaces simultaneously. To overcome current shortcomings, a number of research challenges have to be addressed in this area, ranging from initial conceptualization and modelling, to protocols and architectures engineering, and development of suitable tools, applications and services, and to the elaboration of realistic use-case scenarios by taking into account corresponding societal and economic aspects. By applying a systematic approach the objective of this book is to assess the state of the art and consolidate the main research results achieved in this area. It was prepared as the Final Publication of the COST Action IC0906 " Wireless Networking for Moving Objects (WiNeMO) ". The book contains 15 chapters and is a show-case of the main outcomes of the action in line with its scientific goals. The book will serve as a valuable reference for undergraduate students, post-graduate students, educators, faculty members, researchers, engineers, and research strategists working in this field.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

This second edition volume provides detailed protocols on the theoretical background of cell cycle synchronization procedures and instructions on how to implement these techniques. The chapters in Cell Cycle Synchronization: Methods and Protocols, Second Edition cover subjects such as: physical fractionations including centrifugal elutriation of healthy and apoptotic cells, and nuclei of mammalian cells; large scale mitotic cell synchronization; chromosome formation during fertilization in eggs; synchronization of unicellular organisms; hematopoietic stem cells used to improve the engraftment in transplantation; and cell cycle control. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Practical and comprehensive, Cell Cycle Synchronization: Methods and Protocols, Second Edition is a valuable resource for PhD students and postdoctoral fellows, and researchers interested in general science, pharmacy, medicine and public health, computer science, and life sciences. Specialists and professionals in cell biology, genetics, molecular biology, biochemistry, and pharmacology will also find this book useful.

A handy A5 (6x9 inch) Book for Sketches with 109 pages. It offers Sketch Book - Sketchbook - Framed Pages Paper. With plenty of space to write or draw in paperback format. Practical notebook with borders for work or the first day of school. Also a great sketchbook for school, hobby, recipes or travel. Well suited as a birthday present for men, women and children. Also a great Christmas gift for friends, girlfriend, boyfriend, colleagues who can use this handy sketch book for sketching or drawing, a great help for everyday life. The handy size of A5 is suitable for handbag and backpack. Everybody likes cute Chibi Kawaii style animals with big eyes!

Ford Trucks Since 1905 James K. Wagner.An extremely comprehensive collection of words and pictures portraying the unique history of North American Ford Trucks. A culmination of untold hours of research, this history follows the entire lineof Ford trucks year by year 195-78. The most thorough reference available on these very collectible vehicles also includes Ford buses, vans, tractors, and heavy haulers. Hdbd., 8 1/2"x 11", 416 pgs., 2,+ ill.

Project Management for Engineering, Business and Technology is a highly regarded textbook that addresses project management across all industries. First covering the essential background, from origins and philosophy to methodology, the bulk of the book is dedicated to concepts and techniques for practical application. Coverage includes project initiation and proposals, scope and task definition, scheduling, budgeting, risk analysis, control, project selection and portfolio management, program management, project organization, and all-important "people" aspects—project leadership, team building, conflict resolution, and stress management. The systems development cycle is used as a framework to discuss project management in a variety of situations, making this the go-to book for managing virtually any kind of project, program, or task force. The authors focus on the ultimate purpose of project management—to unify and integrate the interests, resources and work efforts of many stakeholders, as well as the planning, scheduling, and budgeting needed to accomplish overall project goals. This sixth edition features: updates throughout to cover the latest developments in project management methodologies; a new chapter on project procurement management and contracts; an expansion of case study coverage throughout, including those on the topic of sustainability and climate change, as well as cases and examples from across the globe, including India, Africa, Asia, and Australia; and extensive instructor support materials, including an instructor ' s manual, PowerPoint slides, answers to chapter review questions and a test bank of questions. Taking a technical yet accessible approach, this book is an ideal resource and reference for all advanced undergraduate and graduate students in project management courses, as well as for practicing project managers across all industry sectors.

Biotechnology has been labelled as one of the key technologies of the last two decades of the 20th Century, offering boundless solutions to problems ranging from food and agricultural production to pharmaceutical and medical applications, as well as environmental and bioremediation problems. Biological processes, however, are complex and the prevailing mechanisms are either unknown or poorly understood. This means that adequate techniques for data acquisition and

analysis, leading to appropriate modeling and simulation packages that can be superimposed on the engineering principles, need to be routine tools for future biotechnologists. The present volume presents a masterly summary of the most recent work in the field, covering: instrumentation systems; enzyme technology; environmental biotechnology; food applications; and metabolic engineering.
