Mass movement, also called mass wasting or landslide, refers to the downslope movement of mud, regolith (i.e., soil, sediment, and debris), rock, or snow/ice under gravity . Mass movement plays a critical role in the rock cycle, affecting landscape evolution and producing stream valleys when mixed with running water.

## **Fractional models and their applications**

Fractional dynamics basically investigates the behavior and time evolution of mathematical objects through integrations and differentiation of fractional (i.e. non-integer) orders. The main interest of this special issue is to describe and analyze new methods and techniques for solving nonlinear dynamical systems described by fractional differential equations.
