Fundoscopy is an essential examination and can assist in the diagnosis of many diseases. 1 In this particular case, early fundoscopy could have prevented loss of vision. Experts commented that if Dr Q had carried out fundoscopy in his initial consult (as he said he did as part of a cranial nerve exam) then he failed to identify papilloedema, as it is likely to have been present at this time.

Each contains clinical data items from the history, physical examination, and laboratory investigations that are generally

The third section is full of new perspectives on glaucoma. After all, everybody believes and relies – more or less – on bits of
