Erich Prisner's Game Theory Through Examples is an exemplary contribution to the MAA's series of Classroom Resource Materials. The topics include simultaneous games and sequential games, both zero-sum and non-zero-sum, and with both perfect information and randomness. Mixed strategies for games are discussed relatively late, in chapter 27, but nine example chapters follow, so this topic also is available for exploration.

surreal numbers, as well as combinatorial and algebraic (and sometimes non-constructive) proof methods to solve games of certain types, including "loopy" games that may result in infinitely long sequences of moves. These methods address games with higher combinatorial complexity than those usually considered in traditional (or "economic") game theory.
