Foundation engineering applies the knowledge of soil mechanics, rock mechanics, geology, and structural engineering to the design and construction of foundations for buildings and other structures. The most basic aspect of foundation engineering deals with the selection of the type of foundation, such as using a shallow or deep foundation system.

Geo Technical Engineering and Foundation Engineering ...

This one day geotechnical training course will provide a general overview of foundation design for geotechnical practitioners and engineers. The course will look at how information is obtained and then used to provide a design for simple shallow foundations. It will also look at the derivation of the formulae used for basic foundation design.

Most of the foundation design codes allow for the use of advanced analyses methods to compliment their own recommendations. Indeed this is often a requirement if a fuller understanding of foundation behaviour under 3 dimensional loading is sought, particularly if non-homogeneous soils are present.

Foundation Geotechnics - Subsea Geotechnical Engineering

We ' ve explained what geotechnical engineering is all about – it is that subfield of civil engineering wherein the behaviour of soils under the influence of loading forces and soil-water interactions are studied. This study is applied in the extended fields of foundation and earthquake engineering having to deal with soils.
