Data mining is the art and science of intelligent data analysis. By building knowledge from information, data mining adds considerable value to the ever increasing stores of electronic data that abound today. In performing data mining many decisions need to be made regarding the choice of methodology, the choice of data, the choice of tools, and the choice of algorithms. Throughout this book the reader is introduced to the basic concepts and some of the more popular algorithms of data mining. With a focus on the hands-on end-to-end process for data mining, Williams guides the reader through various capabilities of the easy to use, free, and open source Rattle Data Mining Software built on the sophisticated R Statistical Software. The focus on doing data mining rather than just reading about data mining is refreshing. The book covers data understanding, data preparation, data refinement, model building, model evaluation, and practical deployment. The reader will learn to rapidly deliver a data mining project using software easily installed for free from the Internet. Coupling Rattle with R delivers a very sophisticated data mining environment with all the power, and more, of the many commercial offerings.

This book examines the political-economic dynamics in the development of a leading global Internet giant: Alibaba. As both a prominent example of, as well as providing the basic infrastructure for, China's outward expansion, Alibaba demonstrates the complex interplay between different state agencies and units of capital in the context of the rise of global China. Hong Shen investigates the development and expansions of Alibaba and discusses how Alibaba has not only become a leader of China's increasingly globalizing internet but has also increasingly served as a basic infrastructure model for other Chinese companies to go global. Shen also addresses how this process has been constantly shaped and reshaped by complex state-capital interactions along the way. This book shows how different units of capital, both inside and outside of China, have interacted with Alibaba's developmental strategies and illustrates how different state agencies, both domestic and international, have enabled or constrained the company's development, especially its global expansion. This book will appeal to students and scholars of critical political economy of media, global media and digital industries, communication, technology and society, and internet studies. It will also be relevant to policy-makers working in the arena of global internet and trade policies.
