The Illustrated Handbook of Cardiac Surgery is adapted from the Second Edition of the color illustrated Manual of Cardiac Surgery (Springer-Verlag, 1995). The Illustrated Handbook of Cardiac Surgery communicates all the important information, but eliminates the detailed explanation of judgment and technique that is relevant only to cardiac surgeons or other individuals intensely interested in these details. The chapters covering operations explain the basic concepts and fundamentals of the operations. A selection of the most important bibliographic sources follows each chapter, but are not cited in the text. Individuals interested in more exhaustive coverage of information sources should consult the Second Edition of the Manual of Cardiac Surgery. The Illustrated Handbook of Cardiac Surgery should appeal to all individuals caring for cardiac surgical patients: cardiologists, anesthesiologists, radiologists, general surgery residents rotating on cardiac surgery, medical students, physician assistants, nurses, perfusionists, and all other members of the cardiac surgery team. It should even appeal to laypeople who want to read about cardiac surgery in more depth than is available in lay publications. Our attempt has been to produce a book that is clearly written, clearly illustrated, and affordable. The techniques chosen are those developed over three decades of clinical practice and resident training at the Oregon Health Sciences University and St. Vincent Hospital, Portland, Oregon, and Sutter Memorial Hospital, Sacramento, California. These techniques have served us well.

"At any price, Herr Dr. Porsche. At any price below 1000 marks (\$250)," laughed Hitler as he ordered the inauguration of the

Volkswagen project in the late summer of 1933. The scene was Berlin's Hotel Kaiserhof where Hitler, meeting with Germany's most famous automotive engineer, Dr. Ferdinand Porsche, was outlining plans for a "people's car." Hitler wanted, for the German worker, a car that would travel the autobahns, at reasonably high speed, provide gasoline mileage in the 30 to 35 miles per gallon class and be simply constructed and inexpensive to repair. Also, it had to cost less than any other car on the European market.

Computer program packages are described for reducing spectrographic plasma arc data, for handling tape and card files, and for Calcomp plotting. Seven program packages are described in detail, and the program listings are given. (Author).

This book offers a comprehensive guide to state-of-the-art techniques in functional urologic surgery that minimize functional damage to the urinary tract and are of particular value in patients with oncologic or neurogenic diseases. It describes the main minimally invasive surgical techniques currently available step by step, while also offering guidance on indications and how to select appropriate surgical devices to achieve specific oncological and functional outcomes. Further, the book presents data from relevant case series, documenting the favorable functional and oncologic results achieved with these techniques and devices as well as the low associated morbidity and positive impacts on quality of life. Lastly, it offers advice on preoperative assessment and postoperative care, and presents specific diagnostic algorithms of value in daily clinical practice. The contributing authors represent an international mix of respected experts carefully selected for their knowledge of the topics discussed.
