The presence of sophisticated auditory processing in mammals has permitted perhaps the most significant evolutionary development in humans: that of language.

Online Library Holt Advanced Spanish Nuevas

An understanding of the neural basis of hearing is thus a starting point for elucidating the mechanisms that are essential to human communication. The cochlear nucleus is the first region of the brain to receive input from the inner ear and is therefore the earliest stage in the central nervous system at which auditory

signals are processed for distribution to higher centers. Clarifying its role in the central auditory pathway is crucial to our knowledge of how the brain deals with complex stimuli such as speech, and is also essential for understanding the central effects of peripheral sensorineural hearing loss caused by, for example, aging,

ototoxic drugs, and noise. Ambitious new developments to assist people with total sensorineural deafness, including both cochlear and cochleus nuclear implants, require a detailed knowledge of the neural signals received by the brainstem and how these are processed. Recently, many new data have been obtained on the structure

This volume presents a systematic and comprehensive analysis of the Spanish evidential semi-auxiliaries parecer and resultar, the modal constructions with amenazar and prometer, and the modal auxiliaries poder, deber and tener que. These verbs have never been considered together in a global approach that

transcends the classical "verbal periphrases" model. The book proposes a cognitive-functional account of evidentiality and modality in Spanish with special attention to subjectivity and grounding. The theoretical reflection relies on empirical evidence of two sorts: synchronic and diachronic corpus-analyses

alternate with tests that measure the semantic and pragmatic compatibility of the evidential and epistemic constructions with specific sentences. Following the assumption that linguistic forms are determined by their meaning, the array of constructions that characterizes the different verbs justifies their grouping in

three pairs of (semi-)auxiliaries: parecer vs resultar, amenazar vs prometer and poder vs deber/tener que. The distributional differences observed in the corpus are further shown to correlate with different degrees of grammaticalization. Primarily intended for scholars working in the field of Spanish functional linguistics, the

monograph is also relevant for grammaticalization studies and for cognitive-semantic research at large. Given its combined theoretical and applied character, the volume is also of interest to anyone concerned with syntactic processes, lexical semantics or the wider area of discourse analysis and pragmatics.
