As the human race has evolved, it has been socially dependent on certain members deemed leaders of the group. These particular people always possess characteristics that a group of people could rally around in order to reach their goals. Even in the animal kingdom, wild animals will gather around a dominant animal to lead them. For example, a pride of lions has one king lion that leads the pack and ensures every lion is properly fed and protected. Because the male lion will fight to the death for the top spot, this ensures the king is the strongest and therefore the most able to protect and hunt food for his pride, or group. Of course, in today's civilized world, we don't exactly have to fight to the death to lead a group of people. But, in a manner of speaking, any potential leader does have to fight or compete to obtain a leadership position. Instead of proving strength and power, the candidate will have to display how and why they're the most suitable for the position. Instead of physically lunging at an opponent, the candidate will constantly have to demonstrate professional, motivational, and social skills a cut above the rest. This book will help you to develop all the attributes that define a great leader, and will help you discover how to use those qualities to bring your career and personal life to new heights.

The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the verybeginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, "fly in the face of our modern business culture and will, quite frankly, upset some people." Perhaps, but who can afford to ignore these findings?
