This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

The fully revised and updated Third Edition of this textbook provides an accessible introduction to accounting for students coming to the subject for the first time. It embraces the basic techniques and underlying theoretical concepts in accounting and shows how these are applied in various circumstances. This New Edition incorporates major changes which improve and update the previous edition. It can be easily used by students working on their own, as well as in a classroom environment. It provides: - Fully illustrated & worked examples - Student Activities - End of chapter questions, many of which have been taken from major accounting examination bodies. -The solutions to all activities are given at the end of each chapter, and answers to the end of chapter questions are also supplied. Introduction to Accounting is an essential textbook for undergraduate accounting students. It is designed to meet the needs of both the non-specialist and those intending to specialise in accounting at undergraduate and also postgraduate levels. The Solutions Manual will be available via the SAGE website.

Introduction to Business covers the scope and sequence of most introductory business courses. The book provides detailed explanations in the context of core themes such as customer satisfaction, ethics, entrepreneurship, global business, and managing change. Introduction to Business includes hundreds of current business examples from a range of industries and geographic locations, which feature a variety of individuals. The outcome is a balanced approach to the theory and application of business concepts, with attention to the knowledge and skills necessary for student success in this course and beyond.
