Urban pest management has recently faced dramatic change: advances in research and formulation technology now shape the products available and how they are applied. Bringing together ideas from both academic and private enterprises, this book covers methods of pest control, their impacts on human health and the environment, and strategies for integrated management that limit the use of harmful chemicals, providing a practical resource for researchers and policy makers in pest management, urban health, medical entomology and environmental science.

Aphids are among the major global pest groups, causing serious economic damage to many food and commodity crops in most parts of the world. This revision and update of the well-received first edition published ten years ago reflects the expansion of research in genomics, endosymbionts and semiochemicals, as well as the shift from control of aphids with insecticides to a more integrated approach imposed by increasing resistance in the aphids and government restrictions on pesticides. The book remains a comprehensive and up-to-date reference work on the biology of aphids, the various methods of controlling them and the progress of integrated pest management as illustrated by ten case histories.
