Outputs are relatively easy to set-up as their numbers represent the number you set in Mach3 as output. One think to be careful is that the P1 is also used for 0-10V (mach 3 pwm) output. So if setting motor control. avoid using P1 as you might want it for pwm. In image the connectors is in green colour.

Select the Mach3 menu [ (Config)], select [ (Slave Axis)], You will see a dialog box as shown in the image The A axis becomes the slave axis of the X axis. When the X axis moves, the A axis will X move synchronously. When the X-axis performs a home operation, the A-axis is automatically balanced (see the Automatic Homing section).
