This volume contains the proceedings of the 11th International Conference on Structural Analysis of Historical Constructions (SAHC) that was held in Cusco, Peru in 2018. It disseminates recent advances in the areas related to the structural analysis of historical and archaeological constructions. The challenges faced in this field show that accuracy and robustness of results rely heavily on an interdisciplinary approach, where different areas of expertise from managers, practitioners, and scientists work together. Bearing this in mind, SAHC 2018 stimulated discussion on the new knowledge developed in the different disciplines involved in analysis, conservation, retrofit, and management of existing constructions. This book is organized according to the following topics: assessment and intervention of archaeological heritage, history of construction and building technology, advances in inspection and NDT, innovations in field and laboratory testing applied to historical construction and heritage, new technologies and techniques, risk and vulnerability assessments of heritage for multiple types of hazards, repair, strengthening, and retrofit of historical structures, numerical modeling and structural analysis, structural health monitoring, durability and sustainability, management and conservation strategies for heritage structures, and interdisciplinary projects and case studies. This volume holds particular interest for all the community interested in the challenging task of preserving existing constructions, enable great opportunities, and also uncover new challenges in the field of structural analysis of historical and archeological constructions.

Up and Running with AutoCAD 2013 by Elliot Gindis is an easy-to-learn introduction to AutoCAD featuring step-by-step instructions that explain both the why and the how for using this industry standard software package. The book strips away complexities, both real and perceived, and reduces AutoCAD to easy-to-understand basic concepts. All concepts are explained first in theory, and then shown in practice, helping the reader understand what it is they are doing and why, before they do it. The book is divided into three parts, guiding students through the subject matter from the beginning stages of using the software through advanced AutoCAD, including 3D features. Chapters deal with topics such as: layers, colors, linetypes, and properties; text, Mtext, editing, and style; blocks, Wblocks, dynamic blocks, groups, and purge; importing and exporting data; Boolean operations; Dview, walk and fly, animation,

and action recording; and lighting and rendering. Also included is an extensive Appendix for each part, detailing additional useful CAD-related information not often found in other text books. In addition, the book contains supporting graphics (screen shots); a summary with a self-test section at the end of each chapter; drawing examples and exercises; and two running "projects" that the student works on as he/she progresses through the chapters. This book will appeal to beginner through advanced users of AutoCAD; architectural engineers, drafting, civil/construction engineers, and mechanical engineers; and students taking drafting/engineering drawing courses in engineering and engineering technology programs. Strips away complexities, both real and perceived and reduces AutoCAD to easy-to-understand basic concepts Teaches only what is essential to operating AutoCAD first, thereby immediately building student confidence All basic commands are documented step-by-step, meaning that what the student needs to type in and how AutoCAD responds is all spelled out in discrete and clear steps with screen shots added as needed Using the author's extensive multi-industry knowledge of what is important and widely used in practice versus what is not, the material is presented by immediately immersing the student in practical, critically essential knowledge, with no padding of text or filler material All concepts are explained first in theory, and only then is AutoCAD introduced and the actual "button pushing" discussed. This is one of the key concepts in having students understand exactly what it is they are doing and why, before they do it
