it beyond the reach of a science that can help to explain and perhaps even to predict social behaviour. As a system made up of many interacting agents – people, groups, institutions and governments, as well as physical and technological structures such as roads and computer networks – society can be regarded as a complex system. In recent years, scientists have made great progress in understanding how such complex systems operate, ranging from animal populations to earthquakes and weather. These systems show behaviours that cannot be predicted or intuited by focusing on the individual components, but which emerge spontaneously as a consequence of their interactions: they are said to be ‘self-organized’. Attempts to direct or manage such emergent properties generally reveal that ‘top-down’ approaches, which try to dictate a particular outcome, are ineffectual, and that what is needed instead

is a 'bottom-up' approach that aims to guide self-organization towards desirable states. This book shows how some of these ideas from the science of complexity can be applied to the study and management of social phenomena, including traffic flow, economic markets, opinion formation and the growth and structure of cities. Building on these successes, the book argues that the complex-systems view of the social sciences has now matured sufficiently for it to be possible, desirable and perhaps essential to attempt a grander objective: to integrate these efforts into a unified scheme for studying, understanding and ultimately predicting what happens in the world we have made. Such a scheme would require the mobilization and collaboration of many different research communities, and would allow society and its interactions with the physical environment to be explored through realistic models and

Helen Hardacre, a leading scholar of religious life in modern Japan, examines the Japanese state's involvement in and manipulation of shinto from the Meiji Restoration to the present. Nowhere else in modern history do we find so pronounced an example of government sponsorship of a religion as in Japan's support of shinto. How did that sponsorship come about and how was it maintained? How was it dismantled after World War II? What attempts are being made today to reconstruct it? In answering these questions, Hardacre shows why State shinto symbols, such as the Yasukuni Shrine and its prefectural branches, are still the focus for bitter struggles over who will have the right to articulate their significance. Where previous studies have emphasized the state bureaucracy responsible for the administration of shinto, Hardacre goes to the periphery of Japanese society. She demonstrates that

leaders and adherents of popular religious movements, independent religious entrepreneurs, women seeking to raise the prestige of their households, and men with political ambitions all found an association with shinto useful for self-promotion; local-level civil administrations and parish organizations have consistently patronized shinto as a way to raise the prospects of provincial communities. A conduit for access to the prestige of the state, shinto has increased not only the power of the center of society over the periphery but also the power of the periphery over the center.

Growing evidence shows that a dietary pattern inspired by Mediterranean diet principles is associated with numerous health

benefits. A Mediterranean-type diet has been demonstrated to exert a preventive effect toward cardiovascular diseases, in both Mediterranean and non-Mediterranean populations. Part of these properties may depend on a positive action toward healthier metabolism, decreasing the risk of diabetes and metabolic-syndrome-related conditions. Some studies also suggested a potential role in preventing certain cancers. Finally, newer research has showed that a higher adherence to the Mediterranean diet is associated with a lower risk of cognitive decline, depression, and other mental disorders. Overall, a better understanding of the key elements of this dietary pattern, the underlying mechanisms, and targets, are needed to corroborate current evidence and provide insights on new and potential outcomes. This Special Issue welcomes original research and reviews of literature concerning the
