Molecular biology and genetic engineering of yeasts

Molecular biology as the name suggests is the study of biological molecules (DNA,Proteins,RNA etc.). Since genetic engineering primarily involves manipulating these molecules, one must have a profound understanding of how these molecules behave before engaging in genetic engineering. Molecular biology provides this understanding.

Molecular genetics is a sub-field of biology that addresses how differences in the structures or expression of DNA molecules manifests as variation among organisms. Molecular genetics often applies an "investigative approach" to determine the structure and/or function of genes in an organism's genome using genetic screens. The field of study is based on the merging of several sub-fields in ...
