A drive cycle is used to test whether  
repairs to emissions-related  
components were successfully  
recognized by the powertrain control  
module or PCM. The examination itself  
involves a test drive unique to each  
vehicle manufacturer.

## *YourMechanic Advice*

A drive cycle is one of the methods used by a vehicle's powertrain control module (PCM) to determine whether an emissions system repair was performed successfully. It involves a special test drive that duplicates the scenario of a person starting the car and making a short freeway trip, as if driving to work.
