Processing for Android

Google offers a framework to create Augmented Reality (AR) apps for Android, called ARCore. Phone-based AR experiences typically involve drawing digital 3D content on top of the physical world, as seen from the perspective of the phone's camera, in such a way that the digital contents convincingly appear to be part of the real-world environment. Doing this requires applying complex algorithms in real-time to recognize objects in the physical environment, such as walls, pieces of furniture ...
