Proportion Of Extended Spectrum B Lactamase Esbl

A high proportion of Extended-Spectrum-Beta-Lactamase (ESBL) producing Enterobacteriaceae is causing common infections in all regions of the world. The burden of antibiotic resistance due to ESBL in East Africa is large but information is scarce and thus it is unclear how big the problem really is.

Change in the prevalence of extended-spectrum- β -lactamase ...

Abstract. Background: Since the initial appearance in the 1980s, Enterobacteriaceae producing extended-spectrum β -lactamase (ESBL) have increased in prevalence and emerged as a major antimicrobial-resistant pathogen. The source of these antimicrobial-resistant bacteria in the developed world is an area of active investigation.

...*

Extended-spectrum beta lactamase (ESBL) strains are often plasmid-mediated, and most of these enzymes belong to the TEM or SHV families that have been reported in many countries . In recent studies, a significant relationship was observed between quinolone resistance and the latest cephalosporin antibacterial agents (10-13) .

Extended-spectrum β -lactamase-producing Enterobacteriaceae (ESBL-PE) represent a major problem in the management of nosocomial infections. However, ESBL-PE are not systematically monitored in African countries. The aim of this study was to determine ESBL-PE prevalence in patients from three hospitals in N'Djamena, the capital city of Chad, and to characterize the genetic origin of the ...

confirmed by PCR. The proportion of ESBL producers in faecal carriage was statistically different between outpatients and student volunteers (23.1% vs. 6.7%: $p < 0.000$). According to a univariate analysis, previous use of antibiotics (ciprofloxacin) appeared to be a risk factor for ESBL carriage ($p < 0.05$).
