Psychological Science , fifth edition, is a dynamic introduction to psychology that reflects the latest APA Guidelines. With psychological reasoning at the core of this edition, students will learn to critically evaluate information and become better scientific thinkers. W. W. Norton 's new, formative, adaptive online learning tool, InQuizitive, identifies what students know, personalises review content to give them the help they need, and improves student understanding through an engaging, gamelike environment.

Drawing on teaching and learning research, the Sixth Edition provides new tools to improve students' reading, focus, and self-assessment. Chapters are now divided into brief "study units," each of which concludes with a self-test question to increase comprehension. NEW "Putting Psychology to Work" features show students how to apply psychology concepts to future careers. Our formative, adaptive learning tool, InQuizitive, and our online psychology labs, ZAPS 2.0, provide a hands-on approach to assessing students' understanding.

Cognitive Neuroscience: A Reader provides the first definitive collection of readings in this burgeoning area of study.

Written by world-renowned researchers, including Michael Gazzaniga, Cognitive Neuroscience remains the gold standard in its field, showcasing the latest discoveries and clinical applications. In its new Fifth Edition, updated material is woven into the narrative of each chapter and featured in new Hot Science and Lessons from the Clinic sections. The presentation is also more accessible and focused as the result of Anatomical Orientation figures, Take-Home Message features, and streamlined chapter openers.

The fourth edition of the work that defines the field of cognitive neuroscience, offering completely new material.

Perspectives in Memory Research integrates current knowledge about memory from both the brain and cognitive sciences. The existing literature on memory is vast, attesting to the longstanding fascination with commitment to ongoing research at all levels and from widely varying points of view. This exciting collection presents new empirical data and theories concerning the formation, the retrieval, and the integration of memory processes and, to some extent, tries to identify how studying memory processes might help augment learning and training procedures. The chapters on the neurobiologic approach include one on brain function at the molecular level, by Ira Black; one on structure function considerations in the study of memory in cortical networks, by Gary Lynch; one on basic circuits for cortical organization, by Gordon Shepherd; and one on connectionist models of learning and memory, by Terrence Sejnowski. The psychological dimensions are probed by Marta Kutas, who reports on tracking memory capacity in the human brain; William Hirst, who discusses the improvement of memory; and Stephen Kosslyn, who considers imagery in learning. Michael Gazzaniga and William Hirst conclude with an essay on present and future memory research and its applications. Michael Gazzaniga is director of the Division of Cognitive Neuroscience at Cornell University Medical College, president of the Cognitive Neuroscience Institute, and an adjunct professor at the Dartmouth Medical School. A Bradford Book.

Conversations in the Cognitive Neurosciences is a brief, informative yet informal guide to recent developments in the cognitive neurosciences by the scientists who are in the thick of things. "Getting a fix on important questions and how to think about them from an experimental point of view is what scientists talk about, sometimes endlessly. It is those conversations that thrill and motivate," observes Michael Gazzaniga. Yet all too often these exciting interactions are lost to students, researchers, and others who are "doing" science. Conversations in the Cognitive Neurosciences brings together a series of interviews with prominent individuals in neuroscience, linguistics, philosophy, and psychology that have appeared over the past few years in the Journal of Cognitive Neuroscience. The ten interviews are divided into five sections: basic neuroscience approaches to cognition (Floyd Bloom and Mark Raichle), attentional and perceptual processes (Michael I. Posner and William T. Newsome), neural basis of memory (Randy Gallistel and Endel Tulving), language (Steven Pinker and Alfonso Caramazza), and imagery and consciousness (Stephen M. Kosslyn and Daniel C. Dennett). A Bradford Book

What happened along the evolutionary trail that made humans so unique? In his accessible style, Michael Gazzaniga pinpoints the change that made us thinking, sentient humans different from our predecessors. He explores what makes human brains special, the importance of language and art in defining the human condition, the nature of human consciousness, and even artificial intelligence.

Integrated teaching, learning, and assessment tools, created by a master teacher.
