Cyberbullying is one of the darker and more troubling aspects to the growing accessibility of new media technologies. Children in developed countries engage with cyberspace at younger and younger ages, and the use of the internet as a means to bully and harass has been greeted with alarm by educationalists, parents, the media, and governments. This important new book is the result of a four-year international collaboration, funded by the EU, to better understand how we can cope and confront cyberbullying, and how new media technologies can be used to actually support the victims of such abuse. The articles initially define the historical and theoretical context to cyberbullying, before examining key issues involved in managing this pervasive phenomenon. Coverage includes: The definition and measurement of cyberbullying. The legal challenges in tackling cyberbullying across a number of international contexts. The role of mobile phone companies and Internet service providers in monitoring and prevention How the media frame and present the issue, and how that influences our understanding. How victims can cope with the effects of cyberbullying, and the guidelines and advice provided in different countries. How cyber-bullying can continue from school into further education, and the strategies that can be used to prevent it. The ways in which accessing 'youth voice', or maximising the contribution of young people themselves to the research process, can enhance our understanding The book concludes with practical guidance to help confront the trauma that cyberbullying can cause. It will be a valuable resource for researchers, students, policy makers and administrators with an interest in how children and young people are rendered vulnerable to bullying and harassment through a variety of online channels.

In 2010, the International Cyberbullying Think Tank was held in order to discuss questions of definition, measurement, and methodologies related to cyberbullying research. The attendees' goal was to develop a set of guidelines that current and future researchers could use to improve the quality of their research and advance our understanding of cyberbullying and related issues. This book is the product of their meetings, and is the first volume to provide researchers with a clear set of principles to inform their work on cyberbullying. The contributing authors, all participants in the Think Tank, review the existing research and theoretical frameworks of cyberbullying before exploring topics such as questions of methodology, sampling issues, methods employed so far, psychometric issues that must be considered, ethical considerations, and implications for prevention and intervention efforts. Researchers as well as practitioners seeking information to inform their prevention and intervention programs will find this to be a timely and essential resource.

Cyberbullying is a problem that is being increasingly investigated by researchers, however, much of the cyberbullying research literature to date has focused on children and youth. *Cyberbullying at University in International Contexts* fills the gap in the research literature by examining the nature, extent, impacts, proposed solutions, and policy and practice considerations of bullying in the cyber-world at post-secondary institutions, where reports of serious cyberbullying incidents have become more prevalent. This book brings together cutting-edge research from around the world to examine the issue of cyberbullying through a multi-disciplinary lens, offering an array of approaches, interpretations, and solutions. It is not solely focused on cyberbullying by and against students, but also includes cyberbullying by and against faculty members, and permutations involving both students and faculty, as well as institutional staff, presenting perspectives from students, practitioners and senior university policy makers. It draws on research from education, criminology, psychology, sociology, communications, law, health sciences, social work, humanities, labour studies and is valuable

reading for graduate students in these fields. It is also essential reading for policymakers, practitioners and University administrators who recognize their responsibility to provide a healthy workplace for their staff, as well as a safe and respectful environment for their students.

Just as the previous generation was raised in front of televisions, adolescents at the turn of the 21st century are being raised in an internet-enabled world where blogs, social networking, and instant messaging are competing with face-to-face and telephone communication as the dominant means through which personal interaction takes place. Unfortunately, a small but growing proportion of our youth are being exposed online to interpersonal violence, aggression, and harassment via cyberbullying. The mission of this book is to explore the many critical issues surrounding this new phenomenon. Key features include the following.

**Comprehensive** □ The book provides a comprehensive, up-to-date look at the major issues that teachers, school administrators, counsellors, social workers, and parents need to be aware of with respect to cyberbullying identification, prevention, and response. **Practical** □ While the information is informed by research, it is written in an accessible way that all adults will be able to understand and apply. **Expertise** □ Justin W. Patchin and Sameer Hinduja are Co-Directors of the Cyberbullying Research Center ([www.cyberbullying.us](http://www.cyberbullying.us)). Chapter authors represent a carefully selected group of contributors who have demonstrated both topical expertise and an ability to write about the topic in clear, easily accessible language. This book is appropriate for teachers, administrators, parents and others seeking research-based guidance on how to deal with the rising tide of cyberbullying issues. It is also appropriate for a variety of college level courses dealing with school violence and educational administration.
