Since the 1950s, the U.S. Navy Diving Manual has served as the internationally recognized standard for allowable exposure while breathing compressed air at varying depths. For many years, the 1956/1957 Diving Manual "air tables" also provided the prescribed decompression schedules for dive profiles that exceeded allowable exposure limits. Due to concern over unacceptable rates of decompression sickness and key research on hyperbaric medicine that has developed mathematical models for gas exchange in human tissues, the U.S. Navy has now totally revised the Manual's air tables to make use of this valuable new research. These changes, together with those to the Manual's other sections, represent the most comprehensive updating of Navy diving procedures since 1956. Among the key sections affected by this thoroughgoing revision are: Air decompression definitions; Emergency procedures; Repetitive dives; Variations in rate of ascent; Surface-supplied mixed gas diving procedures; Diagnosis and treatment of decompression sickness and arterial gas embolism; Recompression chamber operation. In addition to these key updates, the Manual provides extensive information on medical treatment for dive injuries; dangerous, predatory, and venomous marine animals; and many other topics of interest. It also includes numerous authoritative charts and tables covering all aspects of the diving experience. Revision 6 of the U.S. Navy Diving Manual represents the culmination of extensive research and empirical validation of its core - the crucial air tables that can mean the difference between life and death. These tables, as well as the detailed and carefully researched text, make this latest edition of the Manual an indispensable reference and instructional source for military and civilian divers alike.

"It is about time that a book like The New School came along. The age of security as pure technology is long past, and modern practitioners need to understand the social and cognitive aspects of security if they are to be successful. Shostack and Stewart teach readers exactly what they need to know--I just wish I could have had it when I first started out." --David Mortman, CSO-in-Residence Echelon One, former CSO Siebel Systems Why is information security so dysfunctional? Are you wasting the money you spend on security? This book shows how to spend it more effectively. How can you make more effective security decisions? This book explains why professionals have taken to studying economics, not cryptography--and why you should, too. And why security breach notices are the best thing to ever happen to information security. It's about time someone asked the biggest, toughest questions about information security. Security experts Adam Shostack and Andrew Stewart don't just answer those questions--they offer honest, deeply troubling answers. They explain why these critical problems exist and how to solve them. Drawing on powerful lessons from economics and other disciplines, Shostack and Stewart offer a new way forward. In clear and engaging prose, they shed new light on the critical challenges that are faced by the security field. Whether you're a CIO, IT manager, or security specialist, this book will open your eyes to new ways of thinking about--and overcoming--your most pressing security challenges. The New School enables you to take control, while others struggle with non-stop crises. Better evidence for better decision-making Why the security data you have doesn't support effective decision-making--and what to do about it Beyond security "silos": getting the job done together Why it's so hard to improve security in isolation--and how the entire industry can make it happen and evolve Amateurs study cryptography; professionals study economics What IT security leaders can and must learn from other scientific fields A bigger bang for every buck How to re-allocate your scarce resources where they'll do the most good
