Wastewater treatment plants should be designed so that the effluent standards and reuse objectives, and biosolids regulations can be met with reasonable ease and cost. The design should incorporate flexibility for dealing with seasonal changes, as

well as long-term changes in wastewater quality and future regulations. Good planning and design, therefore, must be based on five major steps: characterization of the raw wastewater quality and effluent, pre-design studies to develop alternative processes and selection of final process train, detailed

objective of this book is  
to present the technical  
and nontechnical issues  
that are most commonly  
addressed in the  
planning and design  
reports for wastewater  
treatment facilities  
prepared by practicing  
engineers. Topics  
discussed include
