On January 27, 1951, the first atomic weapon was detonated over a section of desert known as Frenchman Flat in Southern Nevada, providing dramatic evidence of the Nevada Test Site's beginnings. Fifty years later, author A. Costandina Titus reviews contemporary nuclear policy issues concerning the continued viability of that site for weapons testing. Titus has updated her study of atomic testing with fifteen years of political and cultural history - from the mid-1980s Reagan-Gorbachev nuclear standoff to the authorization of the Nevada Test Site Research Center. In the second edition of Bombs in the Backyard, Titus covers the post-Cold War transformation of American atomic policy as well as our overarching cultural interest in all matters atomic, making this a must-read for anyone interested in atomic policy and politics.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.
