About Space

Spatial Cognition VI: Learning, reasoning, and talking ...

The study of spatial cognition is the study of knowledge about spatial properties of objects and events in the world. Spatial properties include location, size, distance, direction, separation and connection, shape, pattern, and so on. Cognition is about the structures and processes of knowledge: its acquisition, storage, retrieval, manipulation, and use by humans, nonhuman animals, and machines.

Spatial Cognition VI: Learning, Reasoning, and Talking ...

Although some aspects of spatial cognition may be innate, it is clear that many important spatial concepts must be learned from experience. For example, Dutch and German use three spatial prepositions— op , aan , and om in Dutch—to describe containment and support relations, whereas English requires just one preposition— on —to span
