Rural communities in Japan have suffered from significant depopulation and economic downturn in post-war years. Low birth rates, aging populations, agricultural decline and youth migration to large cities have been compounded by the triple disaster of 11 March 2011, which destroyed farming and fishing communities and left thousands of people homeless. This book identifies these challenges and acknowledges that an era of post-growth has arrived in Japan. Through exploring new forms of regional employment, community empowerment, and reverse migration, the authors address potential opportunities and benefits that may help to create and ensure the quality of life in depopulating areas and post-disaster scenarios. This book will be of interest not only to students of Japanese society, but also to those outside of Japan who are seeking new approaches for tackling depopulation challenges.

The book provides a study of sustainable development in rural China. Because of its huge population and vast land area, this is an important issue not only for China but for the whole world. The research presented is both multi aspect and systematical. It can be likened to a tree where the trunk is the three main aspects: economy, environment and rural society, and the five main branches are agricultural development, industrial pollution, energy security, labor migration and social welfare, and these are the book's five main topics. The research methods of field survey and Sino-Japanese comparison will be of particular interest to readers. The field survey enables readers to become familiar with the environment of rural China. Survey reports and data provide readers with a more profound and vivid understanding of rural China and comparative methods benefit readers from different countries and a variety of cultural backgrounds. For Japanese readers or readers who understand Japanese well, they make China more easily understandable, while Chinese readers gain insights into the country's future and the direction of current developments based on a Japanese frame of reference. For readers outside China and Japan, this book serves as an introduction to Chinese society and also to Japan. Finally, the author

provides various paradigmatic scenarios, including default and sustainable. After reading this book, readers will be aware that the earlier and the more we pay attention to these issues, the easier it will be for rural China to achieve a sustainable situation.

This book explores the decline of rural and peripheral areas in Japan, which results from an aging population, outmigration of the younger generations, and the economic decline of the primary sector. Based on extensive original research, the book examines in detail the case of the Noto peninsula. Allowing the locals to tell their stories, describe their problems, and come up with possible solutions, the book demonstrates the serious impact of rural decline on their daily life and work and highlights the struggle to sustain rural living in the globalized age. It argues that some recent innovations in global media, economy, technology, and ideology offer scope for reversing the decline, as some central government initiatives do, but that these are not always noticed, appreciated, and made use of by local people. The book also discusses the nature of the links between the peripheries and the centres - regional, national, and global - and how these often take the form of "internal colonialism."

A revealing look at Japanese design weaving together the stories of people who shaped Japan's design industries with social history, economic conditions, and geopolitics. From cars to cameras, design from Japan is ubiquitous. So are perceptions of Japanese design, from calming, carefully crafted minimalism to avant-garde catwalk fashion, or the cute, Kawaii aesthetic populating Tokyo streets. But these portrayals overlook the creativity, generosity, and sheer hard work that has gone into creating and maintaining design industries in Japan. In *Designing Modern Japan*, Sarah Teasley deftly weaves together the personal stories of people who shaped and shape Japan's design industries with social history, economic conditions, and geopolitics.. Key to her account is how design has been a strategy to help communities thrive during turbulent times, and for making life better along the way. Deeply researched and superbly illustrated, *Designing Modern Japan* appeals to a wide audience for Japanese design, history, and culture.

Offers an in-depth ethnography of paradigm shifts in the lifestyles and values of youth in post-growth Japan. *Urban Migrants in Rural Japan* provides a fresh perspective on theoretical notions of rurality and emerging modes of working and living in post-growth Japan. By exploring narratives and trajectories of individuals who relocate from urban to rural areas and seek new modes of working and living, this multisited ethnography reveals the changing role of rurality, from postwar notions of a stagnant backwater to contemporary sites of experimentation. The individual cases presented in the book vividly illustrate changing lifestyles and perceptions of work. What emerges from *Urban Migrants in Rural Japan* is the emotionally fraught quest of many individuals for a personally fulfilling lifestyle and the conflicting neoliberal constraints many settlers face. In fact, flexibility often coincides with precarity and self-exploitation. Susanne Klien shows how mobility serves as a strategic mechanism for neophytes in rural Japan who hedge their bets; gain time; and seek assurance, inspiration, and courage to do (or further postpone doing) what they ultimately feel makes sense to them. "This book is a valuable contribution to knowledge about diversifying rural Japan and evokes reflection about the future of post-growth Japan. Klien's study benefits from assiduous and long-term field research and insightful analysis. She excels at locating the specifics of the study in theoretical observations and concepts, thereby setting the work into a larger consideration of Japan's paradigm shifts in lifestyle and values." - Nancy Rosenberger, author of *Gambling with Virtue: Japanese Women and the Search for Self in a Changing Nation*

The *Routledge Handbook of Contemporary Japan* presents a synthesized, interdisciplinary study of contemporary Japan based on up-to-date theoretical models designed to provide readers with a comprehensive and full understanding of the dynamics of contemporary Japan. In order to achieve this, the Handbook is organized into two parts. Part I, 'Foundations', clarifies the state of contemporary Japan topic by topic by referring to the latest theoretical developments in the relevant disciplinary fields of politics, international relations, economy, society, culture and the personal. Part II, 'Issues', then offers a series of concrete analyses building upon the theoretical discussions introduced in Part I to help undergraduate and postgraduate students learn how to conduct independent analysis. Locating Japan in a comparative and interdisciplinary perspective, this Handbook is an essential resource for students and scholars interested in Japanese studies, Asian studies and global studies.

This significant and timely volume focuses on the unique trajectory of tourism development in Japan, which has been characterized by an historical emphasis on promoting both domestic and international tourism to Japanese tourists, followed by the more recent policy of competing aggressively in the international incoming tourist market. Initial chapters present an overview of past and present tourism, including policy and research perspectives. Thematic perspectives on tourism and specific contexts and places in which tourism occurs are then examined. Strains of Japanese tourism such as sport, surf, forest, mountain, urban, tea, pilgrimage and even whaling heritage tourism are among those analyzed. The book also explores tourism's role in confronting difficult pasts and presents, and the challenges facing the development of tourism in contemporary Japan. A short postscript outlines some of the challenges and possible future directions tourism in Japan may take in light of the COVID-19 crisis. Written by a team of well-known editors and contributors, including academics from Japan, this volume will be of great interest to upper-students and researchers and academics in development studies, cultural studies, geography and tourism.

The idea that Japan is a socially homogenous, uniform society has been increasingly challenged in recent years. This book takes the resulting view further by highlighting how Japan, far from singular or

monolithic, is socially and culturally complex. It engages with particular life situations, exploring the extent to which personal experiences and lifestyle choices influence this contemporary multifaceted nation-state. Adopting a theoretically engaged ethnographic approach, and considering a range of "escapes" both physical and metaphorical, this book provides a rich picture of the fusions and fissures that comprise Japan and Japaneseness today.

This book inquires what is meant when we say "local" and what "local" means in the Japanese context. Through the window of locality, it enhances an understanding of broader political and socio-economic shifts in Japan. This includes demographic change, electoral and administrative reform, rural decline and revitalization, welfare reform, as well as the growing metabolic rift in energy and food production. Chapters throughout this edited volume discuss the different and often contested ways in which locality in Japan has been reconstituted, from historical and contemporary instances of administrative restructuring, to more subtle social processes of making - and unmaking - local places. Contributions from multiple disciplinary perspectives are included to investigate the tensions between overlapping and often incongruent dimensions of locality. Framed by a theoretical discussion of socio-spatial thinking, such issues surrounding the construction and renegotiation of local places are not only relevant for Japan specialists, but also connected with topical scholarly debates further afield. Accordingly, *Rethinking Locality in Japan* will appeal to students and scholars from Japanese studies and human geography to anthropology, history, sociology and political science.

Environmental issues stretch across scales of geographic space and require action at multiple levels of jurisdiction, including the individual level, community level, national level, and global level. Much of the scholarly work surrounding new approaches to environmental governance tends to overlook the role of sub-national governments, but this study examines the potential of sub-national participation to make policy choices which are congruent with global strategies and national mandates. This book investigates the emerging actors and new channels of Japan's environmental governance which has been taking shape within an increasingly globalized international system. By analysing this important new phenomenon, it sheds light on the changing nature of Japan's environmental policy and politics, and shows how the links between global strategies, national mandates and local action serve as an influential factor in Japan's changing structures of environmental governance. Further, it demonstrates that decision-making competencies are shared between actors operating at different levels and in new spheres of authority, resulting from collaboration between state and non-state actors. It highlights a number of the problems, challenges, and critiques of the actors in environmental governance, as well as raising new empirical and theoretical puzzles for the future study of governance over environmental and global issues. Finally, it concludes that changes in the tiers and new spheres of authority are leading the nation towards an environmentally stable future positioned within socio-economic and political constraints. Demonstrating that bridging policy gaps between local action, national policy and global strategies is potentially a way of reinventing environmental policy, this book will be of interest to students and scholars of Environmental Studies, Environmental Politics and Japanese Politics.
