How to Use Book Creator Introduction to the Forest Stewardship Council The Forest Certification Handbook The

The Forest Certification Handbook is the first book to fully assess the role of certification and provide practical advice on developing, selecting and operating a program. The most critical role of certification is providing an incentive to forest owners and managers to raise the standard of their forest management.

First published in 1995, The Forest Certification Handbook has become the landmark book concerning all aspects of forest and wood product certification from policy to business to in-the-field technical issues. Yet since first publication an enormous amount has happened in the field. This new second edition has been entirely rewritten to incorporate the changes over the past decade, and is a complete and up-to-date source of information on all aspects of developing, selecting and operating a forest certification programme that provides both market security and raises standards of forest management.

From forester to retailer, stakeholders in the industry are under increasing pressure to assure customers that their wood products have come from well managed, sustainable forests. The Forest Certification Handbook gives practical advice on developing, selecting and operating a certification programme which provides both market security and raises standards of forestry management. It provides a thorough analysis of all the issues surrounding certification, including the commercial benefits to be gained, the policy mechanisms required, the interpretation and implementation of forestry management standards, and the process of certification itself. Three unique directories give details of currently certified forests, international and national initiatives, and active certification programmes.

Handbook on Forest Certification, a thorough research work, discusses in detail the concepts and approaches required to meet the desired international standards of forest certification. It covers those aspects of forest certification that are practised globally and need to be applied in the emerging context of forests in India. The book focuses on changing global perspective on forest resources, importance and need for sustainable management of forests, increasing consumer awareness, and dealing with preferences for certified forest products. Drawing on a wealth of information provided by valuable studies across the globe, this book discusses sustainable forest management and forest certification and their impact on conservation and development of biodiversity. It is a comprehensive and detailed guide for forest managers, forest owners, practitioners, forest-based industries, academicians, students and researchers, consultants, and policy makers for the forestry sector in India and South Asia. Key features: Discusses status of forest resources as well as sustainability and forestry Explains essentials of forest certification and process and forest certification schemes Dwells on the extent of forest certification and certified timber market and certification of non-timber forest products Presents framework for forest certification in India Assesses challenges and potentials of forest certification Contents: 1. Status of Forest Resources: World and India 2. Sustainability and Forestry 3. Management of Forests in India: A Historical Perspective 4. Essentials of Forest Certification: Concept, Evolution, Elements, and Process 5. Forest Certification Schemes 6. Extent of Forest Certification and Certified Timber Market 7. Certification of Non-timber Forest Products 8. Framework for Forest Certification in India 9. Stakeholder Expectations and Economics of Forest Certification 10. Sustainability and Forest Certification 11. Challenges and Potential of Forest certification References Index About the Author

Forest certification has been widely accepted as a tool that would encourage industrial and non-industrial management of resources in an environmentally acceptable, socially beneficial and economically viable manner. Much has been written on certification yet five issues have been missing, which this book addresses: an analysis of the scientific ba

First published in 1995, The Forest Certification Handbook has become the landmark book concerning all aspects of forest and wood product certification from policy to business to in-the-field technical issues. Yet since first publication an enormous amount has happened in the field. This new second edition has been entirely rewritten to incorporate the changes over the past decade, and is a complete and up-to-date source of information on all aspects of developing,

selecting and operating a forest certification programme that provides both market security and raises standards of forest management.

In this important book, Lawrence Sager, a leading constitutional theorist, offers a lucid understanding and compelling defence of American constitutional practice. Sager treats judges as active partners in the enterprise of securing the fundamentals of political justice, and sees the process of constitutional adjudication as a promising and distinctly democratic addition to that enterprise. But his embrace of the constitutional judiciary is not unqualified. Judges in Sager's view should and do stop short of enforcing the whole of the Constitution; and the Supreme Court should welcome rather than condemn the efforts of Congress to pick up the slack. Among the surprising fruit of this justice-seeking account of American constitutional practice are a persuasive case for the constitutional right to secure a materially decent life and sympathy for the obduracy of the Constitution to amendment. No book can end debate in this conceptually tumultuous area; but *Justice in Plainclothes* is likely to help shape the ongoing debate for years to come.

The Sustainable Forestry Handbook is widely considered to be the essential aid to understanding and implementing sustainable forest management. Providing a clear and concise guide to the practicalities of implementing international standards for sustainable forest management, this fully updated second edition covers new Forest Stewardship Council requirements, High Conservation Value Forests, clearer requirements on pesticides and developments in policy and forest governance. Aimed at forest managers, and employing extensive cross referencing and easy-to-understand illustrations, this highly practical handbook explains in clear terms what the standards require forest managers to do and how they might go about implementing them.

Forest management auditing is expanding from its traditional focus on forest management, stewardship and Chain of Custody certification to more innovative topics such as ecosystem services, forest carbon credits, Non-Wood Forest Products, wood energy and Fair Trade certification. Forest managers, auditors and project developers require a new range of skills, capacities and expertise to monitor these issues. This book outlines the market-based tools that are required by such professionals to ensure corporate social responsibility in the forestry sector. It shows how a mutual learning process between established forest certification processes and innovative markets is needed. It addresses key topics such as High Conservation Value (HCV) approaches, the role of independent certification versus due diligence process and the engagement of smallholders and SMEs. Beginning with a market and policy analysis, the book fosters a deeper understanding of standards, methodologies and auditing techniques. Numerous case studies are included from a wide range of contexts, including both temperate and tropical forests in developed and developing countries. Overall, the book analyses all the steps towards forest management and forest products and services certification.
