**SPACE SEGMENT The space segment comprise of the satellite**

A ground segment consists of all the ground-based elements of a spacecraft system used by operators and support personnel, as opposed to the space segment and user segment. The ground segment enables management of a spacecraft, and distribution of payload data and telemetry among interested parties on the ground. The primary elements of a ground segment are: Ground stations, which provide radio interfaces with spacecraft Mission control centers, from which spacecraft are managed Ground networks,

A ground station, Earth station, or Earth terminal is a terrestrial radio station designed for extraplanetary telecommunication with spacecraft (constituting part of the ground segment of the spacecraft system), or reception of radio waves from astronomical radio sources.Ground stations may be located either on the surface of the Earth, or in its atmosphere.

The space segment of an artificial satellite system is one of its three operational components (the others being the user and ground segments). It comprises the satellite or satellite constellation and the uplink and downlink satellite links. The overall design of the payload, satellite, ground segment, and end-to-end system is a complex task.

**Space segment—Wikipedia**

The subsystems present in the ground segment have the ability to access the satellite repeater in order to provide the communication between the users. Earth segment is also called as ground segment. Earth segment performs mainly two functions. Those are transmission of a signal to the satellite and reception of signal from the satellite.
