consensus that the planet is heading toward environmental catastrophe: climate change, ocean acidification, ozone depletion, global freshwater use, loss of biodiversity, and chemical pollution all threaten our future unless we act. What is less clear is how humanity should respond. The contemporary environmental movement is the site of many competing plans and prescriptions, and composed of a diverse set of actors, from militant activists to corporate chief executives. This short, readable book is a sharply argued manifesto for those environmentalists who reject schemes of "green capitalism" or piecemeal reform. Environmental and economic scholars Magdoff and Foster contend that the struggle to reverse ecological degradation requires a firm grasp of economic reality. Going further, they argue that efforts to reform capitalism along environmental lines or rely solely on new technology to avert catastrophe misses the point. The main cause of the looming environmental disaster is the driving logic of the system itself, and those in power—no matter how "green"—are incapable of making the changes that are necessary. *What Every Environmentalist Needs To Know about Capitalism* tackles the two largest issues of our time, the ecological crisis and the faltering capitalist economy, in a way that is thorough, accessible, and sure to provoke debate in the environmental movement.

"Pithy, funny, exasperated, and informed...You cannot read a more important hundred pages than *Stop Saving the Planet!*" —Richard White, author of *The Republic for Which It Stands*

We've been "saving the planet" for decades!...And environmental crises just get worse. All this hybrid driving and LEED building and carbon trading seems to accomplish little to nothing—and low-income communities continue to suffer the worst consequences. Why aren't we cleaning up the toxic messes and rolling back climate change? And why do so many Americans hate environmentalists? Jenny Price says *Enough already!* with this short, fun, fierce manifesto for an environmentalism that is hugely more effective, a whole lot fairer, and infinitely less righteous. She challenges you, corporate sustainability officers, and the EPA to think and act completely anew—and to start right now—to ensure a truly habitable future.

Sickened by the contamination of their water, their air, of the Earth itself, more and more people are coming to realize that it is capitalism that is, quite literally, killing them. It is now clearer than ever that capitalism is also degrading the Earth's ability to support other forms of life. Capitalism's imperative—to make profit at all costs and expand without end—is destabilizing Earth's climate, while increasing human misery and inequality on a planetary scale. Already, hundreds of millions of people are facing poverty in the midst of untold wealth, perpetual war, growing racism, and gender oppression. The need to organize for social and environmental reforms has never been greater. But crucial as reforms are, they cannot solve our intertwined ecological and social crises. Creating an Ecological Society reveals an overwhelmingly simple truth: Fighting for reforms is vital, but revolution is essential. Because it aims squarely at replacing capitalism with an ecologically

sound and socially just society, *Creating an Ecological Society* is filled with revolutionary hope. Fred Magdoff and Chris Williams, who have devoted their lives to activism, Marxist analysis, and ecological science, provide informed, fascinating accounts of how a new world can be created from the ashes of the old. Their book shows that it is possible to envision and create a society that is genuinely democratic, equitable, and ecologically sustainable. And possible—not one moment too soon—for society to change fundamentally and be brought into harmony with nature.

“Regardless of your place on the political spectrum, there is much to admire in this book, which reminds us that the stewardship of nature is an obligation shared by all Americans.” —U.S. Senator Angus S. King Jr. The Green movement in America has lost its way. Pew polling reveals that the environment is one of the two things about which Republicans and Democrats disagree most. Congress has not passed a landmark piece of environmental legislation for a quarter-century. As atmospheric CO₂ continues its relentless climb, even environmental insiders have pronounced “the death of environmentalism.” In *Getting to Green*, Frederic C. Rich argues that meaningful progress on urgent environmental issues can be made only on a bipartisan basis. Rich reminds us of American conservation's conservative roots and of the bipartisan political consensus that had Republican congressmen voting for, and Richard Nixon signing, the most important environmental legislation of the 1970s. He argues that faithfulness to conservative principles requires the GOP to support environmental protection, while at the same time he criticizes the Green movement for having drifted too far to the left and too often appearing hostile to business and economic growth. With a clear-eyed understanding of past failures and a realistic view of the future, *Getting to Green* argues that progress on environmental issues is within reach. The key is encouraging Greens and conservatives to work together in the space where their values overlap—what the book calls “Center Green.” Center Green takes as its model the hugely successful national land trust movement, which has retained vigorous bipartisan support. Rich's program is pragmatic and non-ideological. It is rooted in the way America is, not in a utopian vision of what it could become. It measures policy not by whether it is the optimum solution but by the two-part test of whether it would make a meaningful contribution to an environmental problem and whether it is achievable politically. Application of the Center Green approach moves us away from some of the harmful orthodoxies of mainstream environmentalism and results in practical and actionable positions on climate change, energy policy, and other crucial issues. This is how we get to Green.

Easy-to-read and filled with real-world examples of the most complex environmental challenges, this book demonstrates that sound economic analysis and reasoning can be one of the environmental community's strongest allies. This is sure to become an invaluable resource for students, environmental organizations, and policymakers.

A clear, evocative, and well-documented refutation of the idea that overpopulation is at the root of many environmental problems.

A provocative and urgent essay collection that asks how we can live with hope in “an age of ecocide” Paul Kingsnorth was once an activist—an ardent

Bookmark File PDF What Every Environmentalist Needs To Know About Capitalism

environmentalist. He fought against rampant development and the depredations of a corporate world that seemed hell-bent on ignoring a looming climate crisis in its relentless pursuit of profit. But as the environmental movement began to focus on "sustainability" rather than the defense of wild places for their own sake and as global conditions worsened, he grew disenchanted with the movement that he once embraced. He gave up what he saw as the false hope that residents of the First World would ever make the kind of sacrifices that might avert the severe consequences of climate change. Full of grief and fury as well as passionate, lyrical evocations of nature and the wild, *Confessions of a Recovering Environmentalist* gathers the wave-making essays that have charted the change in Kingsnorth's thinking. In them he articulates a new vision that he calls "dark ecology," which stands firmly in opposition to the belief that technology can save us, and he argues for a renewed balance between the human and nonhuman worlds. This iconoclastic, fearless, and ultimately hopeful book, which includes the much-discussed "Uncivilization" manifesto, asks hard questions about how we've lived and how we should live.
